IGCC®/IGMA® LIST of REVIEWED SPACERS and INTEGRATED SPACER SYSTEMS (1/16/2019)

Definitions

Integrated Spacer System: A pre-fabricated multi-component, multi-material and/or multi-function spacer system.

Spacer: A single-material spacer

The list of IGCC®/IGMA® Reviewed Spacers and Integrated Spacer Systems (attached) shall be used to determine the generic class for a specific model of spacer or integrated spacer system. The generic class is then used to determine the eligibility for equivalency of one spacer or integrated spacer system to another. In order for a spacer or integrated spacer system to appear on this list and be eligible for equivalency within a generic class, a passing ASTM E2190 test report, a technical specification for the component, and if applicable a gas content (GCIA) test report utilizing the spacer or spacer system must be submitted and reviewed by the IGCC®/IGMA® Administrative Office. Additionally, a technical specification describing the spacer or spacer system and its technical attributes must be on file. Any question by or discrepancy with the Administrative Office shall be forwarded to the IGCC®/IGMA® Appeals Committee for review. Whenever possible or unless some restriction exists (i.e. lack of fabrication equipment), test sample fabrication shall be by an IGCC®/IGMA® Licensee fabricator. Testing shall be by an IGCC®/IGMA® Approved Independent Laboratory.

Any integrated spacer system or spacer product is eligible for new or initial prototype testing at any time.

Guideline applicable for determining equivalency of spacers and integrated spacer systems:

A.SS.2

A licensee may use a temporary alternate integrated spacer system on the IGCC®/IGMA® list of reviewed integrated spacer systems (most current version) in the same generic class by a) notifying the administrator of the change, b) having test specimens witnessed by the administrator’s representative at the next regular audit, and c) sending the test specimens to an IGCC®/IGMA® approved testing laboratory within four weeks of the test specimens’ fabrication date. The licensee may temporarily use the certification label on a provisional basis commencing with written notification of the administrator and end when test results are received by the administrator.

The following guidelines shall apply for determining and responding to acceptable change:

N.SP.1

A change in spacer material, i.e. aluminum to steel or any other material will require a different IGCC®/IGMA® number.

N.SP.2

A change in spacer surface finish, i.e. anodized to mill finish or hot dip to electro galvanized will require a different IGCC®/IGMA® number

A.SP.4

Any change in supplier of spacer from that tested, everything remaining the same shall permit the licensee to always certify the sealed insulating glass unit with the same IGCC/IGMA number.

The listed supplier shall be the primary producer or the exclusive branding agent or distributor of the identified product. In order for an agent or distributor to be listed, there must be a unique identifier of the product.

IB = Imbedded Desiccant

Some spacer products serve multiple functions. When a spacer includes imbedded desiccant, the product will be included on the Reviewed Spacer List with an “IB” designation for Imbedded Desiccant.

Supplier	Trade Name (if any)	Generic Class Code	Generic Description	Reviewed Unit Fabrication Date	Specification on file
Allmetal		AA	Anodized Aluminum	1/7/19	Yes
		MA	Mill Finished Aluminum	4/30/18	Yes
		SS	Stainless Steel	1/7/19	Yes
		ZS	Zinc Plated Steel	4/18/18	Yes
AluPro/ RollTech	AluPro	AA	Anodized Aluminum	12/6/18	Yes
