IGCC®/IGMA® and IGMAC LIST of REVIEWED SPACERS and INTEGRATED SPACER SYSTEMS

Definitions

Integrated Spacer System: A pre-fabricated multi-component, multi-material and/or multi-function spacer system.

Spacer: A single-material spacer

The List of Reviewed Spacers and Integrated Spacer Systems (attached) shall be used to determine the generic class for a specific model of spacer or integrated spacer system. The generic class is then used to determine the eligibility for equivalency of one spacer or integrated spacer system to another. In order for a spacer or integrated spacer system to appear on this list and be eligible for equivalency within a generic class, for IGCC/IGMA, a passing ASTM E2190 test report*, a technical specification for the component, and if applicable a gas content (GCIA) test report utilizing the spacer or integrated spacer system must be submitted and reviewed by the Administrative Office. For IGMAC, a passing CAN/CGSB 12.8 test report and technical specification for the component must be submitted to the Administration Office. Any question by or discrepancy with the Administrative Office shall be forwarded to the IGCC®/IGMA® Guidelines and Equivalency Sub-Committee for review. *Test sample fabrication shall be by a certification program Licensee fabricator, or a component supplier under auditor witness. Testing shall be by an IGCC®/IGMA® Approved Independent Laboratory.

Any integrated spacer system or spacer product is eligible for new or initial prototype testing at any time.

Refer to Sections 13.1.2, 13.1.3, and 13.2.1 of the IGCC/IGMA Procedural Guide and guidelines G.7(c), G.8(b), G.10, and G.11(b) for IGMAC to determine equivalency of spacers and integrated spacer systems.

The listed supplier shall be the primary producer or the exclusive branding agent or distributor of the identified product. In order for an agent or distributor to be listed, there must be a unique identifier of the product.

Some spacer products serve multiple functions. When a spacer includes imbedded desiccant, the product will be included on the Reviewed Spacer List with an “IB” designation for Imbedded Desiccant.

This list nor the review of components and materials on this list **DOES NOT** take into consideration issues of material or component compatibility with other materials or components. Issues of compatibility shall be addressed through suppliers, internal quality assurance investigation, industry practices (visit www.igmaonline.org www.glasswebsite.com) or other means. IGCC®/IGMA® does not endorse or guarantee satisfaction of any products listed.
