## IGCC®/IGMA® and IGMAC LIST OF REVIEWED SEALANTS (ID-175)

The List of Reviewed Sealants (attached) shall be used to determine the generic class for a specific model of sealant. The generic class is then used to determine the eligibility for equivalency of one sealant to another. In order for a sealant to appear on this list and be eligible for equivalency within a generic class, for IGCC/IGMA, a passing ASTM E2190 test report\*, a technical specification for the component, and if applicable a gas content (GCIA) test report utilizing the sealant must be submitted and the sealant must be reviewed by the Administrative Office. For IGMAC, a passing CAN/CGSB 12.8 test report and technical specification for the component must be submitted to the Administration Office. Any question by or discrepancy with the Administrative Office shall be forwarded to the IGCC®/IGMA® Guidelines and Equivalency Sub-Committee for review. \*Test sample fabrication shall be by a certification program Licensee fabricator, or a component supplier under auditor witness. Testing shall be by an IGCC®/IGMA® Approved Independent Laboratory.

Any sealant is eligible for new or initial Prototype testing at any time.

Refer to guideline A.SE.2 for IGCC/IGMA and guideline G.7(a) for IGMAC to determine equivalency:

**The listed supplier shall be the primary producer or the exclusive branding agent or distributor of the identified product. In order for an agent or distributor to be listed, there must be a unique identifier of the product.**

This list nor the review of components and materials on this list **DOES NOT** take into consideration issues of material or component compatibility with other materials or components. Issues of compatibility shall be addressed through suppliers, internal quality assurance investigation, industry practices (visit [www.igmaonline.org](http://www.igmaonline.org) or [www.glasswebsite.com](http://www.glasswebsite.com)) or other means.
